(54) Title: PEDAL DEVICE

(57) Abstract: A pedal device for rotatable attachment to a crank arm, wherein the pedal has a pedal body with engagement sides which each have a bracket adapted for possible engagement with a functional part designed for cooperation with a user's foot. One of the engagement sides of the pedal body has a first bracket adapted to a fastening piece for the functional part for use during the performance of conventional training exercise. The opposite engagement side of the pedal body has a second bracket adapted to said fastening piece for the functional part for limited tiltability about an axis that extends transverse to the longitudinal axis of the pedal shaft. The functional part may be a shoe or a foot engagement part, e.g., a foot plate.
